About

I specialize in building scalable and maintainable web and mobile applications,
with a strong focus on clean code and long-term performance. My primary tools
are JavaScript and TypeScript, but I'm also experienced in Lua, Go, Python, and
PHP.

Projects

2024

Tokodaim at Dafunda ↗

Tokodaim.com is an upcoming top-up platform designed to
make topping up digital services easy and accessible.
Currently under construction, the site will soon offer a range
of top-up options for gaming, mobile credit, and digital gift
cards—all in one convenient place. Tokodaim aims to provide
a seamless and secure experience with competitive pricing
and multiple payment options.

2024

Filepoin at Dafunda ↗

Filepoin is an upcoming website designed to be an alternative
download resource for Android and Windows apps and
games. Currently in development, Filepoin aims to offer a
curated selection of trusted downloads, providing users with
a convenient and reliable source for finding the latest
software and games. With a focus on quality and ease of
access, Filepoin will soon be a go-to platform for users
seeking safe and straightforward download options for their
favorite apps across Android and Windows devices.

2024   365Games Changelog at 365Games ↗

The 365games Changelog is the dedicated resource for
tracking all updates, improvements, and new features on the
365games platform. This changelog provides a transparent
view of recent changes, including enhancements, bug fixes,
and service adjustments, ensuring users stay informed about
what's new. From interface updates to performance
optimizations, the 365games Changelog keeps the
community up-to-date with all the latest developments that
enhance the 365games experience.

2022   Dafunda Push at Dafunda

Dafunda Push is a WordPress plugin that enables self-hosted
push notifications directly on your WordPress site using a
service worker. Designed to eliminate the need for third-party
services like OneSignal, Webpushr, or Firebase, Dafunda
Push allows site owners to send instant notifications to their
audience without relying on external platforms. With
complete control over notifications, this plugin provides a
streamlined, privacy-friendly way to engage visitors and keep
them updated with the latest content or updates right from
your own server.

2022   Dafunda Blocks at Dafunda

Dafunda Blocks is a powerful WordPress plugin designed to
enhance the Gutenberg editor by adding a wide range of
custom functionality blocks. Ideal for content creators,

Dafunda Blocks introduces unique blocks tailored for reviews, recommendations, rankings, how-to guides, and more, enabling users to create engaging, structured, and visually appealing content. With an easy-to-use interface, this plugin expands Gutenberg's capabilities, allowing WordPress users to build more dynamic and versatile pages that cater to various content needs.

2020

Dafunda Updater at Dafunda

Dafunda Updater is a WordPress plugin that automates updates for other plugins directly from GitHub. Designed for seamless version control, Dafunda Updater detects changes in the code on GitHub and automatically updates the corresponding WordPress plugins, ensuring that users always have the latest features, bug fixes, and improvements. Perfect for developers and site managers, this tool simplifies plugin management by keeping codebases up-to-date without manual intervention, enhancing both site security and functionality.

Side Projects

2023

Check IGN ↗

Check IGN is a library designed to verify the availability and validity of in-game names (IGNs). It allows developers to integrate a feature that checks whether a specific in-game name is already taken or available for use within a platform. This tool is particularly useful for verifying unique user IGN identifiers for top-up services, ensuring that the names are available for transaction purposes.

2023

Digiflazz SDK ↗

Digiflazz SDK is a library designed to streamline communication with the Digiflazz service, an Indonesian marketplace for buying and selling digital products. Ideal for top-up websites, the SDK enables seamless integration with

Digiflazz's extensive catalog, including game vouchers, mobile pulsa (credit), and other digital goods.

2023   Tripay SDK ↗

Tripay SDK is a library designed to facilitate seamless communication with the Tripay.co.id payment gateway API. This SDK provides developers with an easy-to-integrate solution for incorporating Tripay's payment processing services into their applications or websites.

Work Experience

2020 — 2025   Full-stack Software Developer at PT. Melabuh Media Kreatif (Dafunda Media) ↗

Indonesia

I am responsible for all technology-related business areas of the company and lead the Development Team. My responsibilities include:

- Leading and managing the Development Team
- Setting the technical direction and standards for projects
- Architecting and designing scalable and maintainable software solutions
- Conducting code reviews and providing guidance to team members
- Ensuring the quality and timely delivery of software projects
- Keeping up-to-date with industry trends and best practices
- Identifying and implementing process improvements to enhance team productivity and efficiency
- Developing web-based applications using React, Next.js, Astro, and PostgreSQL
- Migrating WordPress-based applications to Astro Headless CMS
- Deploying applications to servers

2020 — Now   Freelance Software Developer at Fiverr ↗

As a freelance software developer on Fiverr, I specialize in developing robust and scalable applications using TypeScript, JavaScript, Golang, and more. My expertise lies in working with headless stacks, enabling clients to create flexible and

efficient content management solutions. With a strong focus on clean, maintainable code and seamless user experiences, I deliver high-quality projects tailored to meet each client's unique needs.

Education

2020 — 2021	Information Systems Major at Universitas Ahmad Dahlan ↗ Yogyakarta, Indonesia Drop Out
2014 — 2017	Natural Science at MA Alif Al-Ittifaq Bandung, Indonesia
